sudo apt install traceroute

traceroute tsec.edu

nikto:

sudo apt install nikto

nikto -h tsec.edu

Dmitry:

sudo apt install Dmitry

Dmitry tsec.edu

WHOIS retrieves information about the registration of a domain name (like ownership, contact details, registration date, etc.).

Nikto is a web server scanner that checks for vulnerabilities like outdated software, misconfigurations, or security issues.

DIG (Domain Information Groper) queries DNS records to find information about domain names, such as IP addresses or mail servers.

Traceroute tracks the path that packets take from your computer to a destination (e.g., a website) by listing each hop along the route.

Dmitry (Deepmagic Information Gathering Tool) is a command-line tool used for gathering information about a host. It can perform functions like obtaining subdomains, email addresses, and open ports on a target system.
